

Group Project 1 Guide

1. All pages should include the boilerplate HTML along with at least a `<header>`, `<nav>`, `<section>`, `<footer>` and should be commented by section. The header and footer should be styled the same with text centered. `<header>`'s should include a linear-gradient background to achieve a dark shade. The nav should be hoverable and link to each destination accordingly with your logo being Home.
2. All CSS styles should be placed within the ONE CSS file and should have BASE styles for everyone to use and should be commented on by section. Be sure to utilize at least one id for each page but mostly using classes and pay close attention to shadows on text and other elements
3. The index.html file should have two images as a background image within the `<header>`.
 - a. The About Us section should include a `<video>` and `<p>` aligned using Float. The `<video>` should have borders and controls and this section should also have a different background color.
 - b. The Services section should include a `<h1>`, `<p>`, `<table>`, `<button>/<a>`. The `<table>` should be styled with the th being a solid color while the background of the rows should be alternated in color. The `<th>` should be at the top of the `<table>` and the whole `<table>` should be centered. Be sure to include the back to top `<button>/<a>`.
4. The hours.html should be much earlier than the index.html. Be sure to include the necessary information and structure for the `<header>` and `<footer>`.
 - a. The schedule section should include the `<h1>`, `<table>` with `<th>` aligned vertically on the left or in the first column and a `<p>` next to the table using float. Don't forget to style the `<table>` according to the example.
5. The leadership.html file should have a gif file as the background for the `<header>`.

- a. The leadership section should include the `<h1>`, `<p>`, and six (6) cards aligned using float.
- 6. The contact.html file should have two background images within the `<header>`
 - a. The email section should include the `<h1>`, `<p>`, and `<form>`. Be sure to wrap your form in a `<div>` and then style the `<form>`. The `<form>` should be centered and include a submit button, 3 inputs and 1 `<textarea>`. Make sure the submit button changes on hover.
